TrueSight Cloud Security

Automated cloud and container security
and compliance at scale

PRODUCT DESCRIPTION

TrueSight Cloud Security automates security and compliance testing and remediation for multi-cloud resources and containers, so that configurations are managed consistently, securely, and with an audit trail.

BUSINESS CHALLENGE

As organizations accelerate innovation in the cloud, security and compliance becomes increasingly complex. Decentralized IT spending impairs visibility of the organization's security posture across hundreds or even thousands of cloud accounts. Similar but not identical services across multiple cloud platforms complicate the secure configuration of resources which apps consume. And widespread adoption of containers, microservices, and agile methodologies has increased the speed at which Dev teams push updates to production. These factors combine to make cloud security a perfect storm.

BMC SOLUTION

TrueSight Cloud Security automates security and compliance testing and remediation of cloud resources and containers. Automated remediation, via either the UI or REST API, closes security and compliance gaps consistently, quickly, and with an audit trail. Extensive policy checks verify that the containers and multi-cloud resources which your apps consume are configured securely. TrueSight Cloud Security helps to achieve and maintain security and compliance across your multi-cloud footprint.

KEY FEATURES

TrueSight Cloud Security is a SaaS solution which automates security and compliance testing of multi-cloud resource configurations and containers, to help achieve and maintain a fortified cloud security posture.

- **Automated security assessment** for nearly any cloud asset

- **Automated remediation** via a point-and-click UI or API

- **Extensive out-of-the-box policies** based on recent CIS best practices, as well as custom policy creation

- **Container security** at multiple layers of cluster, host, daemon, image, and container level, including Docker and Kubernetes

KEY BENEFITS

- **Consistent, secure configuration** of the cloud resources which your apps consume, without hampering innovation or velocity

- **Multi-cloud security at scale** through automation, removing the manpower bottleneck

- **Find and fix** compliance violations quickly, efficiently

- **Avoid the risks and costs** associated with a cloud security breach or compliance violation

- **Get started in under 5 minutes**
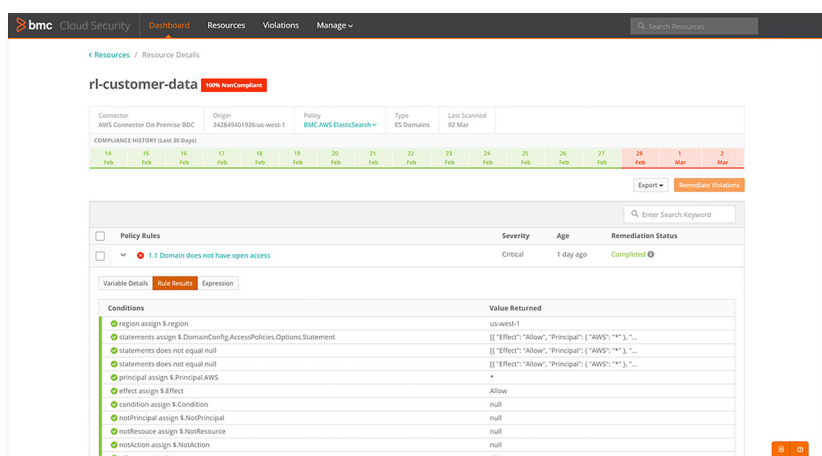

The Resource Details view within TrueSight Cloud Security provides compliance history and information.

PRODUCT DETAILS

Multi-Cloud Security. Designed for the cloud, in the cloud, to provide consistent, automated policy enforcement and remediation at scale across cloud service providers, accounts, and applications. Expand your public cloud footprint at DevOps speed, confident that your security and compliance posture keeps pace.

Container Security. Short-lived assets like containers break the traditional compliance model. Secure containers at multiple levels, from the Kubernetes cluster down to the Docker image, to fuel your business' agility without compromising security.

SaaS Security at Scale. There is nothing to install, so it's easy to get started. Scale testing up or down as needed without additional deployment friction.

Intuitive Monitoring and Reporting. Discover key insights into policy violations: quickly understand which checks were made, what failed, and which resources are affected.

Out-of-the-Box Content. A deep bench of policy content accelerates your time to value, to consistently and securely configure the cloud resources which your business apps consume. Each policy is fully customizable, so the organization can tailor its policies to its unique criteria.
