BMC Security Operations Solutions

Security and compliance automation for
multi-cloud environments

MULTI-CLOUD CHANGES EVERYTHING

As IT leaders strive to meet the demands of the business, they need to balance supporting growth in the traditional data center while accelerating their adoption of public cloud infrastructure. Security is of paramount concern. According to Forrester 58% of enterprise organizations suffered a breach at least once in the past year, and over 41% of those external breaches exploited some manner of software vulnerability.

CHALLENGES

Many organizations are turning to the cloud but quickly find that traditional approaches and tools fail with DevOps and multi-cloud environments. Cloud security operations tools are immature and heavily dependent on manual steps. Using one set of approaches and tools for cloud and one for traditional data centers leaves organizations in a position where they lack visibility and cannot consistently enforce and ensure security and compliance. Furthermore, the speed, scale, and complexity have gone far beyond human scale.

BMC SOLUTION

BMC SecOps solutions automate the prioritization and remediation of the most critical vulnerabilities or compliance violations. With BMC SecOps solutions, you can ensure security, governance, and compliance across private and public cloud environments, while providing frictionless access to cloud resources.
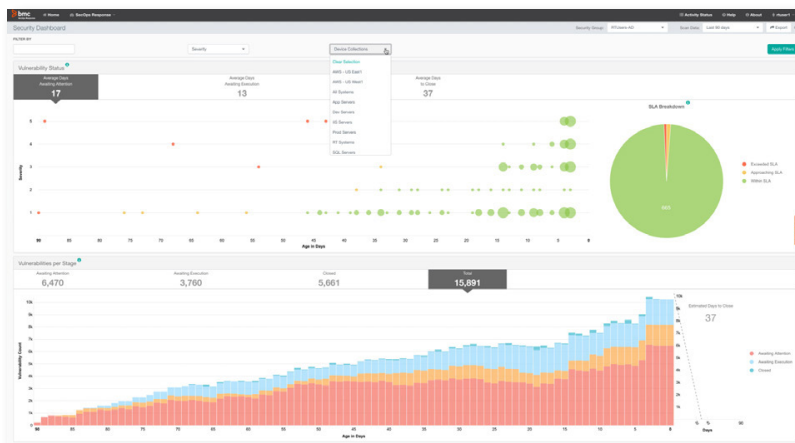

TrueSight Vulnerability Management gives a holistic view of all known risks.

KEY FEATURES

Service and Operational Analytics

- Address risks based on policy and impact to ensure the most critical issues are fixed first, uptime is protected, and stability is maintained

Security View of Operational Plans

- Visualize how quickly risks will be eliminated with graphical views of planned operations actions, predictive SLAs, and burndowns

Blind Spot Protection

- Identify assets that are unmonitored and potentially exposed, and automatically map dependencies

Compliance Controls

- Full cycle of system discovery, monitoring, remediation, and integrated change control

KEY BENEFITS

Operational Intelligence

- Make security actionable with vulnerability information enriched by operational data to prioritize threats based on the impact within your specific operating environment

Multi-Tier Remediation

- Drive remediation across servers, networks and cloud services with automation that is capable of considering the application, the process, and the severity of the issue

Automated Compliance

- Achieve security and compliance with key regulations across cloud services, servers and networks keeping you audit ready.

BMC SECURITY OPERATIONS SOLUTIONS

TrueSight Vulnerability Management
Gain visibility into vulnerabilities across the environment, analyze and prioritize based on policy and risk to the business. Take remediation action through integration with server and network automation solutions such as TrueSight Server Automation, TrueSight Network Automation and Microsoft SCCM.

TrueSight Cloud Security
SecOps Policy Service embeds compliance and security testing into the service delivery process by providing continuous verification, analytics, and governance.

TrueSight Network Automation
Accelerate reliable network configuration changes to increase agility, reduce costs and lock down security across physical, virtual and software defined infrastructures.

TrueSight Server Automation
Quickly and securely provision, configure, patch and maintain physical, virtual and cloud servers.
